Work Experience

Software Engineer @ Apple | *San Diego, CA*

Jun 2025 - Current

- Owned an app (Swift server + Python RESTful API) for automating media operations tied to SwiftUI.
- Did internal research and operations for AI-assisted engineering. Power user, read papers, evaluated model performance, presented strategies, created skills and documentation for the team.
- Automated an experimentation platform - reworked legacy code, wrote a new API and Claude integration/UI system, and worked with physical devices in a lab. 5x'd output and reduced workload.

Data Science Co-op @ Wayfair | *Boston, MA*

Jan 2024 - Jun 2024

- Led a project implementing NLP interactions for our database. Collected SQL query data, helped design integrations for our codebase, and was the primary point of contact for a startup partnership.
- Ran ads on Google PLA, managing \$1M+ of daily ad spend. Learned about the ad space and the Google ecosystem, data techniques in SQL/Python, presented findings to leadership.

Venture Capital Intern @ Boom Capital Ventures | *San Francisco, CA*

May 2022 - Sep 2023

- Worked with a lean team investing in deep tech startups (space, bio, AI). Attended pitch meetings and traveled with the GP. Reviewed pitches, met new founders, and provided teams with feedback.

Projects

Can't Find Me - Obscuring LLM Manifolds | *Northeastern University | Boston, MA* *Sep 2024-Dec 2024*

- An AI paper iterating on early redteaming methods. I develop a system for black-box LLM fingerprinting, evaluate the performance of various models, and iterate on defense techniques.

LearnPrompting | *Independent Organization | Boston, MA*

Jan 2023-Jan 2024

- Researched prompting, redteaming, and evals during the early days of LLMs. Wrote programs, created content and brand resources. Still a top 5 contributor in what is now a community of 50,000.

Replicator Dynamics Modeling | *Northeastern University | Boston, MA*

Jul 2023-Dec 2023

- Created a codebase for running game theory simulations, translating C++ and Java programs into Python to create a simple notebook interface for researchers.

Education

Northeastern University, Boston, MA

Sept 2021-May 2025

B.S. in Computer Science & Philosophy, Summa Cum Laude, Dean's List, Honors

GPA: 3.87/4.00

Focus Areas: Trustworthy GenAI, LLM-Integrated Systems, Advanced Logic, Evolutionary Game Theory

Activities: Rossetti Research Scholars, A Capella, Husky Ambassadors, Club Ultimate Frisbee

Skills

Computer Languages: *Proficient:* Python, Swift, SQL | *Familiar:* Typescript, React, Obj-C, Java, C#

Software/Libraries: Git, Pytorch, Tensorflow, SwiftUI, AWS, GCP, Postgres

Design: Figma, Mathematica, Procreate, Powerpoint/Slides, Video Editing

Interests

Philosophy: Deep love and experience in reading/writing philosophy. Game theory, social choice, tech ethics.

Music: Guitarist, vocalist, and DJ. Competed in the ICCAs, played in multiple bands. Proficient with sound equipment (recording, live performance, EQ/mixing) and general setup (lights, set, coordination).

Outdoors: Ski/snowboard, biking, sailing, surfing, frisbee, diving, mountaineering. Experienced solo traveler.
